

INSTALLATION CASE STUDY

Booth Air Conditioning supply and install air conditioning, refrigeration and ventilation equipment for a wide range of different clients.

Booth's installations are required to be aesthetic, cost efficient and to meet customer requirements.

Hotels therefore, running on 24/7 – 365 days per annum basis are highly sensitive to any disruption caused by contractors working within their establishments. Booth have a substantial client base of large hotel groups and hotel chains, who require their installations to be performed with the least possible impact on its customers.

One particular hotel, undertaking an R22 refrigerant air conditioning replacement scheme, required the works to be performed in a "live" environment. With systems being installed in the hotels gymnasiums, entertainment and leisure areas whilst they were still in open to the hotel guests.

Booth Air Conditioning took these considerations on board, and developed a programme of works that enabled the hotel to best operate whilst the works were ongoing.

Not only were the works delivered on time, and to budget, but they managed to complete the project without a single issue arising.

Here is what the hotel maintenance manager had to say:-

"Gentlemen,

Just a note to say how completely satisfied and impressed I have been with the recently completed A/C replacement program here at the hotel.

From start to finish the project has been an absolute joy from the perspective as your client. In over 13 years experience I have never worked on a project that has run so smoothly where everyone involved at each stage of the project, from the contractor has been so sympathetic and understanding as to the needs of our business and had a can do attitude.

Special thanks must go out to the team of fitters who were so efficient and I have not had one word of complaint only praise as they worked in public open areas allowing the hotel to function without issue throughout the entire program.

Excellent Work!"

Booth Air Conditioning would be happy to provide references of installations we have completed. Above all we pride ourselves on our workmanship and quality of service.
